Understanding Letter Pairs and Their Impact on Typing

Frequently used letter pairs, such as "th," "he," or "in," are combinations of letters that frequently occur together in the English language. Understanding these pairs can significantly influence your typing efficiency. When you recognize these patterns, your fingers can move more fluidly across the keyboard, reducing the time spent thinking about what to type next. This familiarity allows for a more natural flow, leading to faster and more accurate typing. In my experience, when I began focusing on these letter pairs, I noticed a significant drop in my typing errors, which boosted my confidence and overall typing speed.
