PMU cartridge needles are specialized tools used in the application of permanent makeup. Unlike traditional tattoo needles, which are typically single-use and can pose risks in terms of hygiene and precision, cartridge needles come pre-loaded in disposable cartridges. This design not only ensures a sterile environment for each treatment but also provides the artist with the ability to switch between different needle configurations seamlessly. The technology behind these needles emphasizes safety and efficiency. Many cartridges are designed with a built-in membrane that prevents ink backflow, further enhancing hygiene. Understanding these differences is essential for anyone interested in PMU, as the right tools can make a significant difference in the quality of the final results.
