

The 2026 Pivot: How a Salesforce ISV Partner Can Transition Your App to “Agentic” Capabilities?

Hello, fellow creators in technology! You already know that if your application is part of Salesforce’ app ecosystem, things are changing rapidly. Then, in 2026, typical automation is no longer adequate; hence, we have the name AgentExchange for what was once the AppExchange, which signifies the arrival of the age of autonomous labour.

Don’t let yourself or your app lag behind. Let’s see how you can employ a specialized [Salesforce ISV Partner](#) to help implement autonomous, intent-driven workflows into your app.

The evolution of Agentic AI in AgentExchange and the Role of a Salesforce ISV Partner
With the big Salesforce marketplace overhaul, apps need to move from reactive to proactive agents. Salesforce has aggressively taken steps toward this future, such as its \$50 million AgentExchange Builders fund to help software vendors stay in tune with its new platform.

According to Salesforce, the digital labor market is expected to exceed \$6 trillion by the year 2026, and “agentic” features will be the leading driver of ROI in enterprise software.

Agentic applications are capable of executing complex tasks in Slack or core CRMs without human input thanks to Data 360.

Essential Steps Your Salesforce ISV Partner Takes to Facilitate an Agentic Adjustment
Revamping the architecture of your application is no easy task. For this reason, a reputable provider of Salesforce development solutions can help you navigate through these technological processes:

Step 1: Conversion to Model Context Protocol (MCP)

Your years-old code has to speak the language of AI. The developers have to make sure that the core business logic of your application is transformed into secure “Actions” that meet the requirements of the MCP and can be executed automatically by Agentforce.

Step 2: Creating the Scratch Card Viewer

Companies need to create a secure environment while operating with AI. Your vendor will create advanced permission levels and control the actions of the AI.

Step 3: Making the Application Ready for Semantic Search & 2GP Packaging

Old-fashioned search is dead. Your app must undergo re-engineering for intent-based semantic search, using Data 360 and following the 2GP model.

Are you ready for the agentic shift? Your Launch Checklist

- Review any outdated Apex, LWC, and Flow code to ensure it is prepared for AI integration.

- Make a list of some basic properties of the application that could become stand-alone “actions.”
- Import/export models into/from secure API connectors via the Model Context Protocol (MCP).
- Complete the tightest Salesforce agentic security review.

Choosing Your Product Path

Capability	Legacy Salesforce App	Agentic AI App (2026)
Operation	Reactive (User must click/trigger)	Autonomous (Triggered by data intent)
Integration	Heavy custom APIs & middleware	Plug-and-play via Slack & MCP servers
Discovery	Keyword search on AppExchange	Conversational semantic search on AgentExchange

Expert Tip: Don't make your entire app 100% standalone in one night. First, create an Agentforce action from your favorite feature. This decreases the friction in your development journey and gets you to market quicker!

Bring Autonomous Power to Your App with a Trusted Salesforce ISV Partner! Moving your software over to agentic features may appear as intimidating work to do, but it is surely the best way to remain relevant in today's corporate game. Selecting the right proficient [Salesforce ISV Partner](#) would render the process hassle-free, safe, and profitable!

[Tech9logy Creators](#) is a Registered Salesforce ISV Partner with over 12+ years of experience. We have a certified team of 40+ developers with extensive knowledge about

Salesforce AppExchange and provide you with the best-in-class personalized apps. Our dedicated Salesforce experts help you bring the best out of your CRM and ensure your business operates at its highest potential.
