Countertop models are the most common; these compact units can fit seamlessly on your kitchen counter or a picnic table, making them perfect for home use or parties. They usually have a decent ice production capacity, allowing you to produce several pounds of ice in a day. Under-counter units are designed to be installed in a cabinet or built into a bar area, providing a more permanent solution for ice production without taking up additional surface space. Key Features to Consider

When selecting a portable ice maker, there are several key features to keep in mind. First, consider the ice production capacity; some machines can produce as little as 20 pounds of ice per day, while others may exceed 30 pounds. This is crucial for larger gatherings or frequent use. Next, the size and weight of the unit matter, especially if you plan to transport it frequently. Speed of ice making is another important factor—many models can produce their first batch of ice in as little as 6-15 minutes, which is fantastic for entertaining.
